

HAI-Wearable Sensor Study

The
**Healthy Aging
Initiative**

Marcus Institute
for Aging Research
Hebrew SeniorLife

HARVARD MEDICAL SCHOOL
AFFILIATE

1 What is the purpose of this sub-study?

We aim to understand your movement patterns from a small sensor, called ActiPAL, which is placed on your thigh to track physical activity.

2 How to Enroll

Let the HAI team know during your yearly assessment or call study coordinator Kailin at 617-363-8856 after the study visit.

3 Getting Started

Once you agree to participate, we will have you:

1. Sign the Consent Form.
2. Receive the Sensor from the HAI team.
3. Put on the ActiPAL sensor and wear the sensor on your thigh for 10 days.
Please try to wear the ActiPAL sensor on the same day you receive it.

4 How to Wear ActiPAL

1. Attach the sensor to the **front of your mid-thigh while sitting**.
2. Attach using the clear adhesive patch.
3. **The 'little guy' icon must stand upright when you stand!**
4. **Leave it on for 10 days.**

ActiPAL Sensor

②

③

④

The ActiPAL sensor is waterproof, so you do not need to remove it while showering or bathing. However, please remove it before swimming. Additional adhesive patches can be provided if needed.

5 How to Return

- After 10 days, **drop off the sensor at the drop box at your housing site**. Ask the HAI team where it is located.
- You will receive a report of your activity data from the ActiPAL sensor at the end of the study.

You may receive reminder calls from the study team during the course of the study, and we're happy to answer any questions you have at any time.
